# Visual data using cards

A single number, such as total sales, market share year over year, or total opportunities, is sometimes the most important thing you want to track. A type of visualization in Power BI called a *card* may be the best way to view that number. As with almost all of the native Power BI visualizations, cards can be created using the report editor or Q&A.

Create a card using the report editor:
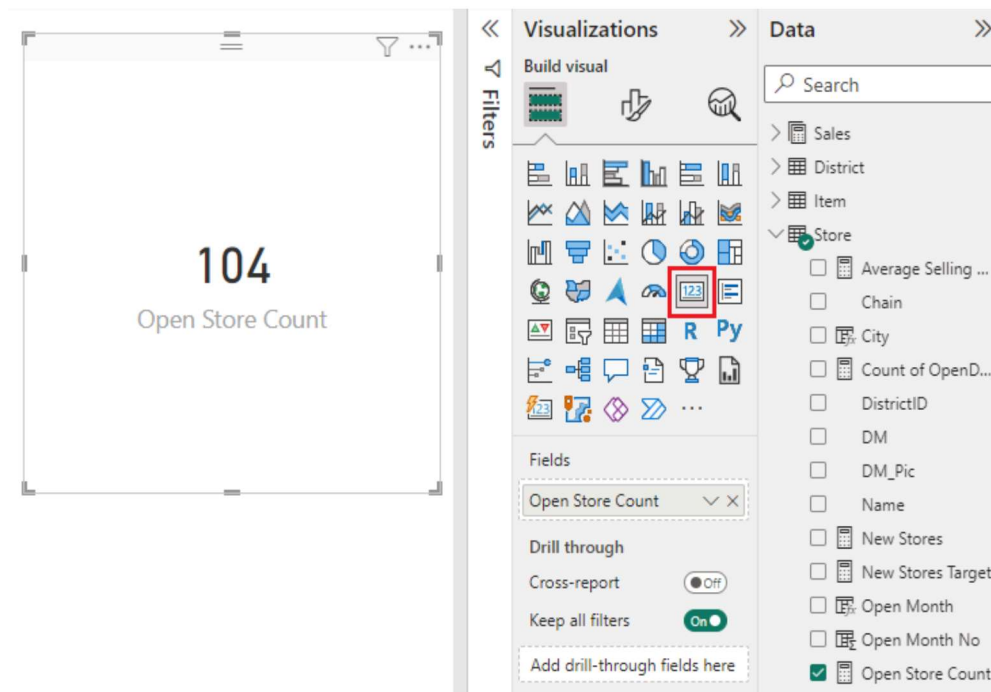

Create a card from the Q&A question box:
